Assignment 4: SQL Table Design and Data Querying

Overview:

In this assignment, you'll design relational tables and perform basic SQL operations. You will create two tables, insert sample data, and execute queries to retrieve and analyze information.

Requirements:

1. Employee Table

Table Name: Employees
Columns:
- EmpID INT PRIMARY KEY
- Name VARCHAR(50)
- Department VARCHAR(30)
- Salary DECIMAL(10,2)

Insert the following rows:

```sql
INSERT INTO Employees (EmpID, Name, Department, Salary) VALUES
  (1, 'John Doe', 'HR', 50000),
  (2, 'Jane Smith', 'IT', 60000),
  (3, 'Alice Johnson', 'Finance', 55000),
  (4, 'Bob Brown', 'HR', 45000),
  (5, 'Charlie White', 'IT', 65000);
```

Submission Type : Write the SQL query in the **PDF/Doc/Word** file and Take a screenshot of this part Output **(as screenshot_1)** and save it in the same **PDF/Doc/Word** file.

2. Departments Table

Table Name: Departments
Columns:
- DeptID INT PRIMARY KEY
- DeptName VARCHAR(50)
- Location VARCHAR(50)

Insert this row:

```sql
 INSERT INTO Departments (DeptID, DeptName, Location)
   VALUES (101, 'Sales', 'New York');
```

Submission Type : Write the SQL query in the **PDF/Doc/Word** file and Take a screenshot of this part Output **(as screenshot_2)** and save it in the same **PDF/Doc/Word** file.

3. SQL Queries:

a. Retrieve all employees:

```sql
 SELECT * FROM Employees;
```

Submission Type : Write the SQL query in the **PDF/Doc/Word** file and Take a screenshot of this part Output **(as screenshot_3a)** and save it in the same **PDF/Doc/Word** file.

b. List distinct departments from the Employees table:

```sql
 SELECT DISTINCT Department FROM Employees;
```

Submission Type : Write the SQL query in the **PDF/Doc/Word** file and Take a screenshot of this part Output **(as screenshot_3b)** and save it in the same **PDF/Doc/Word** file.

c. Find employees with salary > 55000:

```sql
 SELECT * FROM Employees WHERE Salary > 55000;
```

Submission Type : Write the SQL query in the **PDF/Doc/Word** file and Take a screenshot of this part Output **(as screenshot_3c)** and save it in the same **PDF/Doc/Word** file.

> Tip: If a table name already exists, append a suffix (e.g., Employees1, Departments1) to avoid errors.

Submission Guidelines:

Create One Main Folder (named Assignment4_YourName) which includes -

- One **Doc/PDF/Word** file containing all the Queries and the screenshots of each part.
- Put your SQL file as **Assignment4_YourName.sql**

Convert the folder into ZIP format.
Upload the ZIP folder on the submission portal.

Watch this to learn how to create ZIP file
